Xhol; RNA was supplied by Christian Bachem & Beatrix

Xhol; RNA was supplied by Christian Bachem & Beatrix

Horvath(Laboratory of Plant Breeding, Dept. of Plant

Bornators, Wageningen University, The Netherlands). Total

RNA was isolated from developing axillary buds of potato

nodal stem cutings cultured on medium for the

introduction of tuber formation as described in Bachem et

al. (Plant Journal 1996). Tissue samples were taken of

stages corresponding to growing stolons and the early

stages of tuber formation.

10.5 kb range using preparative agarose gel electrophoresis. Vector DNA was prepared from a derivative of pwD42 (gil47321141gb|AF129072.1), a copy-number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to adaptored vector DNA, and transformed into chemically-competent E. coli XL10-Gold (Stratagene) cells and selected for ampicillin resistance."
                                                                                                                                                                                                                                                                                                                                                                                             308, Biomedical Polymers Research Bldg., 20 S. 2030 E., SLC, UT 2, USA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    (http://www.jax.org/resources/documents/dnares/). The DNA was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was blunt end-repaired with T4 DNA polymerase and T4 polymucleotide kinase. Adaptor oligonucleotides were ligated to the blunt ends in high molar excess. The adaptored DNA was purified and size selected for a 9.5 to

Tetraodon nigroviridis genome survey sequence T7 end of clone 222024 of library G from Tetraodon nigroviridis, genomic survey
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Submitted (12-APR-2000) to the EMBL/GenBank/DDBJ databases
This sequence is a single read and was generated as part of a large
scale clone-end sequencing project of the Tetraodon nigroviridis
genome. For more information, please take a look at

/note="Organ: leaf; Vector: RescueMu (engineered from pBlueScript backbone); Site_1: BamHI, Site_2: BgIII; RescueMu is a 4.9 kb, modified maize Mu transposon designed to allow plasmid rescue from total genomic DNA. Mu elements insert preferentially into transcription units: For more information on RescueMu, go to the web site 'www zmdb iastate.edu' and follow the links for 'RescueMu. Grid G was grown at Stanford in 2000. DNA was extracted from leaf punches, double digested using BamHI and BgIII, and ligated to form circular plasmids. DH10B cells were transformed and then screened on LB plates with ampicillin."

The sequence contained an oligo-dr track that was present in the oligonucleotide that was used to prime the synthesis of first strand cDNA and therefore this may represent a bonafide poly A tail. The sequence tag present in the cDNA between the NotI site and the oligo-dr track served to verify it as a clone from the normalized rat eye library cDNA Library Preparation: W.B. Soares Lab Clone distribution: clones will be available through Research Genetics (www.resgen.com) The following repetitive elements were found in this cDNA sequence: 1-35, >AT_rich#Low_complexity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          1 (bases 1 to 280)

The BB16 library was contributed by the Soares laboratory and it was constructed and normalized as described by Bonaldo, M.F., Lennon, G. and Soares, M.B. (1996), Genome Research 6(9): 791-806. RNA was prepared from dissected brains of adult worker bees of various ages and various behavioral groups.

Constructed at the Institute for Genomic Research (TIGR),
Rockville, MD. Genomic DNA isolated from a cloned population of
TYPRANGEMED brucei (TREED927/4 GUTAt 10.1) was mechanically sheared
to give a tight size distribution (
4 kb). The v + i method used for the library construction is
described in detail in Smith, H. and Venter, J.C. (Making small
insert libraries for whole genome shotgun sequencing projects. In
Barrell, Oxford University Press, 1999).

 FEATURES
 Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi; Mammalia; Eutheria; Rodentia; Sciurognathi; Muridae; Murinae; Mus. 1 (bases 1 to 120405)

SE Hezker, M.L., Lewis, L.R., Hume, J., Edwards, C., Harris, C., Dederich, D., Thomas, S., Okwuonu, G., Carlock, C., Garner, T., Daddison, S., Paece, A., Milliams, G., Bonnin, D., Brooks, A., Brown, J., Buhay, C., Davis, C., Davi
 Center project intollation.

Center project name: RP23-265L9

Center clone name: RP23-265L9

Center clone name: RP23-265L9

Center clone name: RP3-265L9

Sequencing vector: M13 L00821

Chemistry: Dye-primer Bodipy: 100% of reads

Assembly program: Phrap; version 0.990329

Consensus quality: 147066 bases at least Q40

Consensus quality: 206320 bases at least Q30

Estimated insert size: 186499; suun-of-contigs estimation

Quality coverage: Ox in Q20 bases; sum-of-contigs estimation

Quality coverage: 1.8x in Q20 bases; sum-of-contigs estimation
 NOTE: Estimated insert size may differ from sequence length (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
NOTE: This is a "working draft' sequence. It currently consists of 38 contigs. The true order of the pieces is not known and their order in this sequence record is
 AC046147 120405 bp DNA linear HTG 16-OCT-2001 Mus musculus chromosome 12 clone RP23-265L9, *** SEQUENCING IN PROGRESS ***, 38 unordered pieces.
 Direct Submission Submission Submitted (13-APR-2000) Human Genome Sequencing Center, Department Submitted (13-APR-2000) Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA On Oct 14, 2001 this sequence version replaced gi:11094635.
 arbitrary, Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as It is available and the accession number will be preserved.

Direct Submission
Submitted (09-AUG-2001) Genome Sequencing Center, Washington
University School of Medicine, 4444 Forest Park Parkway, St. Louis,
MO 63108, USA
 Vateration, Wateration, Direct Submission
Submitted (09-JAN-2002) Department of Genetics, Washington
Oniversity, 444 Forest Park Avenue, St. Louis, Missouri 63108, USA
On Aug 9, 2001 this sequence version replaced gi:14626397.
 The RPCI-11 human BAC library was made from the blood of one male donor, as described by Oscogawa, K., Woon, P.Y., Zhao, B., Frengen, E., Tateno, M., Catanese, J. J. and de Jong, P.J. (1998) An improved approach for construction of bacterial artificial chromosome libraries. Genomics 51:1-8. The clone may be obtained either from Research Genetics, Inc. (http://www.resgen.com) or Pieter de Jong and coworkers at the Roswell Park Cancer Institute
(http://bacpac.med.buffalo.edu)
 Mapping information for this clone was provided by Dr. John D. McPherson, Department of Genetics, Washington University, St. Louis MO. For additional information about the map position of this sequence, see http://genome.wustl.edu/gsc
 NOTICE: This sequence may not represent the entire insert of this clone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap
 This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats, all regions were covered by sequence from more than one subclone; and the assembly was confirmed by
 Data from
 NEIGHBORING SEQUENCE INFORMATION:
The clone sequenced to the left is RP11-102G8, 2000 bp overlap.
Actual start of this clone is at base position 1 of RP11-512N1;
actual end is at base position 164706 of RP11-512N1.
 Center: Washington University Genome Sequencing Center
 Polymorphisms exist between RP11-512N1 and RP11-102G8.
 AC032014 was used to finish this clone AC068614. Location/Qualifiers
 between neighboring data submissions.

 (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
NOTE: This is a 'working draft' sequence. It currently consists of 82 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
 Consensus quality: 147975 bases at least Q40 Consensus quality: 158603 bases at least Q30 Consensus quality: 166972 bases at least Q20 Estimated insert size: 151344; sum-of-contigs estimation Quality coverage: Ox in Q20 bases; agazose-fp estimation Quality coverage: 2.1x in Q20 bases; sum-of-contigs estimation

CLONE LENGTH: This sequence does not necessarily represent the entire insert of this clone. Overlapping regions of clones are only sequenced and submitted once, so the sequence for the remainder of the insert may be found in the record for the adjacent clones. Overlapping clones are noted at the beginning and end of the Features listing.

STSs are identified using ePCR (Genome Res. 7:541-550) searches of a local database that includes entries from dbSTS, GDB, and local mapping efforts.

Repeats are identified using RepeatMasker (A. Smit and P. Green, ANNOTATION OF FEATURES:

unpublished.) for Human and Mouse sequences.
Genes and Region of sequence similarity are identified by BLAST (Nuc. Acids Res. 25:3389:3402) similarity (expect < le-34) to the EST and cDNA sequences. Genes demonstrate at least two exons flanked by consensus splice sites that maintained sequence continuity across the splice junctions. Sequences that are not identical matches are annotated as similar.

SEQUENCING READ COVERAGE:Sequencing is completed to a minimum standard of double strand coverage with a minimum of 2 clones and 2 reads with no ambiguities or 2 chemistries with a minimum of 2 clones and 3 reads with no ambiguities. If the sequence quality for a region does not meet this standard, it will be indicated in the annotation as Low Coverage.

QUALITY OF INDIVIDUAL BASES:This sequence meets stringent quality standards - estimated error rate less than 1 per 10,000 bases. Reports of lowest quality individual bases and measures of base quality are listed below. Description of the metrics can be found

at URL: http://gc.bcm.tmc.edu:8088/quality.info/genbank.annotation.html.

 FEATURES
 Submitted (26-APR-2001) Sanger Centre, Hinxton, Cambridgeshire, CB10 15A, UK. E-mail enquiries: humquery@sanger.ac.uk Clone requests: clonerequest@sanger.ac.uk clone.

To Jun 8, 2001 this sequence version replaced gi:7242326.

During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with a mail overlap as described above.

This sequence was finished as follows unless otherwise noted: all
 regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (1.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest. The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases: Em:, EMBL; Sw:, database can be found at
 ALIJ3414

Human DNA sequence from clone RP5-1060P11 on chromosome 19.

Contains ESTs, STSs and GSSs. Contains 10 natural killer cell
receptors, including the KIR2DL2, KIR2DL4, KIR2DS1 and KIR2DS2

genes for killer cell two domain long cytoplasmic tail
immunoglobulin-like receptor 2 and 4 and and short cytoplasmic tail
immunoglobulin-like receptor 1 and 2 and the KIR3DS1 and KIR3DS1
genes for killer cell three domain short cytoplasmic tail
immunoglobulin-like receptor 2 and short cytoplasmic tail
immunoglobulin-like receptor 2 and short cytoplasmic tail
immunoglobulin-like receptor 1 and 2 and the KIR3DS1

genes for killer cell three domain short cytoplasmic tail
immunoglobulin-like receptor 1 and complete sequence.
 HTG; KIR2DL2; KIR2DL4; KIR2DL5; KIR2DS1; KIR2DS2; KIR3DL2; KIR3DS1;
 of
 Eukaryota, Metazoa, Chordata, Craniata, Vertebrata, Euteleostomi, Mammalia, Eutheria, Primates, Catarrhini, Hominidae, Homo.
1 (bases 1 to 159169)
Milne,S.
 http://www.sanger.ac.uk/Projects/C_elegans/wormpep This sequence was generated as part of a collaboration with Michael Wilson, Michaela Torkar and John Trowsdale, Department of Pathology, Division of Immunology, the University of Cambridge, UK. RP5-1060P11 is from the library RPCI-5 constructed by the group opeter de Jong. For further details see
 This sequence is the entire insert of clone RP5-1060P11 The true right end of clone RP1-52N12 is at 11343 in this sequence.

NOTICE: This sequence may not represent the entire insert of this cone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions. Center project name: H\_NH0632K21

Web site: http://genome.wustl.edu/gsc Contact: sapiens@watson.wustl.edu

Center code: WUGSC

all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats, all regions were covered by sequence from more than one subclone; and the assembly was confirmed by This sequence was finished as follows unless otherwise noted: restriction digest.

MAPPING INFORMATION: The sequence of this clone was established as part of a mapping and sequencing collaboration between the NHGRI Chromosome 7 Mapping Project (Eric D. Green, Director), John D. McPherson in the Department of Genetics (Washington University), and the Washington University Genome Sequencing Center. For additional information about the map position of this sequence, see http://www.nhgil.nih.gov/DIR/GTB/CHR7, send mailto:egreen@nhgil.nih.gov, or see http://genome.wustl.edu/gsc

SOURCE INFORMATION:

```
The RPCI-11 human BAC library was made from the blood of one male donor, as described by Osoegawa, K., Woon, P.Y., Zhao, B., Frengen, E., Tateno, M., Catanese, J.J. and de Jong, P.J. (1998) An improved approach for construction of bacterial artificial chromosome libraries. Genemics 51:1-8 The clone may be obtained either from Research Genetics, Inc. (http://www.resgen.com) or Pieter de Jong and coworkers at the Roswell Park Cancer Institute (http://bacgac.med.buffalo.edu)

NOTE: Estimated insert size may differ from sequence length (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
NOTE: This is a 'working draft' sequence. It currently consists of 59 contigs. The true order of the pieces is not known and their order in this sequence record is
Tang, H., Tansey, J., Taylor, C., Taylor, T., Telfrod, B., Thomas, N., Thomas, S., Usmani, K., Vasquez, L., Vera, V., Villalon, D., Vinson, R., Wall, R., Wang, S., Ward-Moore, S., Warren, R., Washington, C., Watlington, S., Williams, G., Williamson, A., Wlezzyk, R., Wooden, S., Weinstock, G. and Gibbs, R., Te., Thou, J., Zorrilla, S., Nelson, D., Weinstock, G. and Gibbs, R.
 Direct Submission
Submitted (12-JAN-2002) Human Genome Sequencing Center, Department
of Molecular and Human Genetics, Baylor College of Medicine, One
Baylor Plaza, Houston, TX 77030, USA
 Consensus quality: 169488 bases at least 040 Consensus quality: 176660 bases at least 030 Consensus quality: 183878 bases at least 020 Consensus quality: 183878 bases at least 020 Estimated insert size: 174717; sum-of-contigs estimation Quality coverage: 0x in 020 bases; agarose-fp estimation Quality coverage: 3x in 020 bases; sum-of-contigs estimation
 Assembly program: Phrap; version 0.990329First call to
 arbitrary. Gaps between the contigs are represented as tuns of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will

 This sequence was generated from part of bacterial clone contigs of human chromosome 22, constructed by the Sanger Centre Chromosome 22 Mapping Group. Further information can be found at http://www.sanger.ac.uk/HGF/Chr212

During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above. The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases:

Ems. EMBL: Sww. SWISSPROT; Tr., TREMBL: Wp., WORMPEP; Information http://www.sanger.ac.uk/Projects/C_elegans/wormpep CTA-833B7 is from the human BAC library described in U-J. Kim et al. (1996)
 VECTOR: DBelobacii
IMPORTANT: This sequence is not the entire insert of clone
CTA-833B7 It may be shorter because we only sequence overlapping
sections once, or longer because we arrange for a small overlap
between neighbouring submissions.
The true right end of clone CITF22-24E5 is at 100 in this sequence.
The start of this sequence overlaps with sequence Z82185.
 Direct Submission
Submitted (08-DEC-1999) Sanger Centre, Hinxton, Cambridgeshire,
Submitted (08-DEC-1999) Sanger Centre, Hinxton, Cambridgeshire,
CB10 1SA, UK. E-mail enquiries: humquery@sanger.ac.uk Clone
requests: clonerequest@sanger.ac.uk
On May 18, 1998 this sequence version replaced gi:2578146.
This sequence has been finished according to sequence map criteria
as follows. An attempt is made according to sequencing problems,
such as compressions and repeats, but not necessarily within known
annotated human repeat sequence elements (e.g. Alu). Where the
sequence is ambiguous, there is an annotation using the 'unsure'
 Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

```
requestrs: clonerquest'stanger.ac.uk

On Jul 17, 2001 this sequence version replaced gi:13751261.

During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quallity data (i.e., phred quallity of a compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest. The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases: Em: EMBL; Sw:, SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information on the WORMPEP database can be found as secience databases: Em:, EMBL; Sw:, As generated from part of bacterial clone contigs of human chromosome 13. constructed by the Sanger Centre Chromosome 13 happing Group. Further information can be found at http://www.sanger.ac.uk/PHGP/Ch113

RPI1-456Bl8 is from the library RPCI-11.2 constructed by the group of Pieter de Jong. For further details see
 IMPORTANT: This sequence is not the entire insert of clone RP11-456B18 It may be shorter because we sequence overlapping sections only once, except for a 100 base overlap. The true right end of clone RP11-456B18 is at 140756 in this sequence. The true left end of clone RP11-78L16 is at 68441 in this sequence. The true right end of clone RP11-108H9 is at 100 in this
 Human DNA sequence from clone RP11-456B18 on chromosome 13, Complete sequence.
 Eukaryota, Metazoa, Chordata, Craniata, Vertebrata, Euteleostomi;
Mammalia; Eutheria; Primates; Catarrhini; Hominidae; Homo.

 Sequencing vector: M13; L08821
Sequencing vector: M13; L08821
Sequencing vector: M13; L08821
Chemistry: Dye-primer Bodipy: 32% of reads
Chemistry: Dye-terminator Big Dye: 68% of reads
Assembly program: Phrap; version 0.990329
Consensus quality: 226075 bases at least 040
Consensus quality: 237688 bases at least 020
Estimated insert size: 252844; sum-of-contigs estimation
Quality coverage: 0.3 in 020 bases; sum-of-contigs estimation
Quality coverage: 5.3x in 020 bases; sum-of-contigs estimation
 Submitted (22-JUN-2000) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA On Feb 3, 2002 this sequence version replaced gi:15799494.
 NOTE: Estimated insert size may differ from sequence length (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html) NOTE: This sequence may represent more than one clone.

NOTE: This is a "working draft' sequence. It currently consists of 20 contigs. The true order of the pieces is not known and their order in this sequence record is
 arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
 142460: contig of 142460 bp in length 142560: gap of unknown length 145752: contig of 3092 bp in length 145752: gap of unknown length 150236: contig of 484 bp in length 150336: gap of unknown length 153377: contig of 3241 bp in length

Sequencing of Drosophila chromosome 2L, region 36C-36D
 Sequence submitted by:

Berkeley Drosophila Genome Project
Lawrence Berkeley National Laboratory, MS 64-121
Berkeley, CA 94720
This sequence was assembled using end sequences from a whole genome shotgun and from subclones of this BAC and its neighboring clones. For further information about this sequence, including its location and relationship to other sequences, please visit our sequence archive Web site (http://www.fruitfly.org/sequence/) or send email to bdgp@fruitfly.berkeley.edu.
 Submitted (06-SEP-1999) Drosophila Genome Center, Lawrence Berkeley Laboratory, MS 64-121, Berkeley, CA 94720, USA On Mar 22, 2001 this sequence version replaced gi:7264761.
